

Timertag EHR test codes

For EHR teams testing their build · GDETPP001 Appendix A, Rev A · October 25, 2026

Each code below is a GS1 DataMatrix in exactly the format a Timertag label shows on the nurse's phone after activation. Each uses the real GTIN for its label type and a serial number reserved for testing. Scan them off this page or off a screen.

Test codes only. Serials 00000000000000000001 and 00000000000000000002 are reserved for testing and are never issued on a Timertag label.

Suggested checks, for each label type

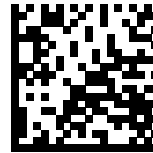

1. Scan test code 1. Your EHR should create or link the device record, with the scan time as the start time.
2. Scan test code 1 again. Your EHR should match it to the same device.
3. Scan test code 2. Your EHR should treat it as a different device of the same type.
4. Record a removal scan of test code 1. Your EHR should close that device record, with the scan time as the removal time.

Peripheral IV

GTIN 09356681010014

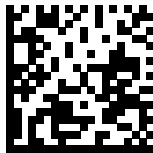

(01) 09356681010014
(21) 00000000000000000001
Peripheral IV test code 1

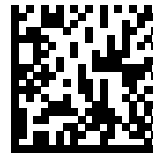

(01) 09356681010014
(21) 00000000000000000002
Peripheral IV test code 2

Urinary catheter

GTIN 09356681010021

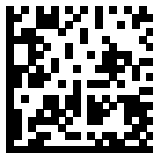

(01) 09356681010021
(21) 00000000000000000001
Urinary catheter test code 1

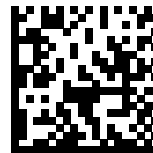

(01) 09356681010021
(21) 00000000000000000002
Urinary catheter test code 2

IV admin set

GTIN 09356681010038

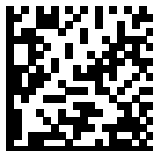

(01) 09356681010038
(21) 00000000000000000001
IV admin set test code 1

(01) 09356681010038
(21) 00000000000000000002
IV admin set test code 2

Dressing

GTIN 09356681010045

(01) 09356681010045
(21) 00000000000000000001
Dressing test code 1

(01) 09356681010045
(21) 00000000000000000002
Dressing test code 2

A scanner set to send the GS1 symbology identifier returns, for example,]d20109356681010014210000000000000000001. There is no group separator in the code. Full guide: timertag.com/the-four-labels.
